Recommended Actions

- Target carrier consolidation — negotiate volume-based freight rates with the highest-cost carriers in the table (left) before adding capacity elsewhere.
- Close the OTIF gap — prioritize dispatch-time fixes for carriers below the fleet average OTIF % before committing to a service-level target.
- Balance the two targets — use the sliders above to test how much cost savings the network can absorb before it conflicts with the OTIF improvement goal; evaluate both scenarios together, not independently.

Implementation considerations: these are directional planning scenarios, not committed cost reductions. Actual savings depend on carrier contract terms and lead time — validate any target against live carrier negotiations before finalizing the routing plan.
